Application No. 10/822,796 Amendment dated October 27, 2005 Reply to Office Action of July 27, 2005

Amendments to the Specification:

Please replace paragraph [0036] with the following amended paragraph:

[0036] FIG. 1 shows an example of an uncut template having a square shape having the same perimeter dimensions as, for example, an 11 13/16 inches by 11 13/16 inches ceramic tile. The horizontal and vertical lines of weakness 10 and the vertical lines of weakness 11 are equidistant from one another. The diagonal lines of weakness [[12]] 11 at forty-five degree and one hundred thirty-five degree angles are equidistant from each other and connect to both horizontal [[10]] and vertical lines of weakness [[11]] 10. A complete cut [[13]] 12 is present at each corner of the template at forty-five degree and one hundred thirty-five degree angles approximately 40 percent across the template. Such complete cuts [[13]] 12 allow for more easily snapping off or breaking off of the inner squares and triangles by applying pressure by ones fingers. Pegs [[14]] 13 protrude from the perimeter of the template to resemble tile grout space or space between objects.
